THE FAMICOM IS WEAK TO WATER! INSIDE THERE ARE MICROCHIPS WITH LOTS OF WIRES STICKING OUT.

ELECTRICITY RUNS THROUGH THEM, BUT IF TOUCHED BY WATER THERE WILL BE A SHORT CIRCUIT!

THESE ARE ALSO LIKE PARTS OF THE BRAIN, WITH ONE HOLDING INSTRUCTIONS AND THE OTHER HOLDING GRAPHICS DATA.

INSIDE THE CARTRIDGE THERE ARE 2 ROM CHIPS (MICROCHIPS THAT HOLD DATA).

TRANSLATED BY WWW.HIGSBY.NET

WHEN A CARTRIDGE IS PLUGGED INTO THE CONSOLE'S 60 PIN CONNECTOR, THE 2 ROM CHIPS CONNECT WITH THE CPU AND PPU.

CLICK

THE CPU THEN READS THE INSTRUCTIONS FROM THE CARTRIDGE'S MEMORY, PERFORMS CALCULATIONS FOR THE GAME, AND SENDS VAROIUS INSTRUCTIONS TO THE PPU.

THE PPU'S IMAGES ARE CONVERTED INTO ELECTRO-MAGNETIC WAVES BY THE RF MODULATOR, SENT THROUGH THE RF SWITCH, AND THEN DISPLAYED ON THE TELEVISION SCREEN

THE CARTRIDGE'S INSTRUCTIONAL DATA IS THE SCRIPT, THE GRAPHICS DATA IS THE ACTORS, THE CPU IS THE DIRECTOR, THE PPU IS THE CAMERA, AND THE RF MODULATOR IS THE BROADCASTING STUDIO.
